AP Macro Review: A Look at Japan

Part I: Current Economic Indicators

	2023 Q1 Data	Source
Potential Growth Rate	.62%	Bank of Japan
GDP Growth Rate	1.8%	<u>FRED</u>
Inflation Rate	3.3% (as of July 2023)	Bank of Japan
Unemployment Rate	2.6%	<u>FRED</u>
Natural Rate of Unemployment	3%	NBER (page 1)

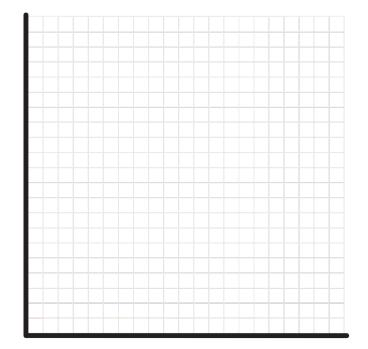

- 1. Based on the data above, which state of the economy (positive output gap, negative output gap, or full employment) would you characterize the Japanese economy as being in? Use the data to defend your response.
- 2. Based on your answer to #1, draw a correctly labeled graph of the Japanese economy using the AD-AS model.

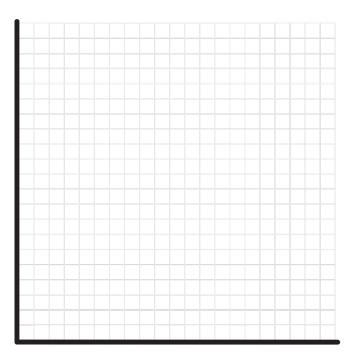

Name:	Date:

Part II: Shocks to the Japanese Economy

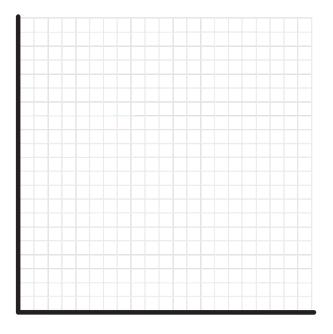

1. Japan lies on two plates, the Pacific plate and the Philippine plate, which make it particularly vulnerable to earthquakes. In 1923, Japan experienced the Great Kanto Earthquake, which had a magnitude of 7.9. As a result of this earthquake, over 105,000 lives were lost and it caused serious damage to the infrastructure of Japanese cities. Draw the SR impact of this earthquake on the Japanese economy using the AD-AS model. Assume Japan starts at full employment.

2. To assist in the fight against climate change, many Japanese companies have invested in green technology to reduce their carbon footprint and improve the efficiency of their production processes. Draw the impact of this increased investment on the Japanese economy using the AD-AS model. Assume Japan starts at full employment.

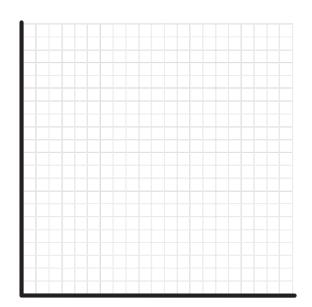

3. Japan's fertility rate has been declining since the 1970s and currently is about 1.4 children per woman. Draw the SR impact of this declining fertility rate on the Japanese economy using the AD-AS model. Assume Japan starts at full employment.

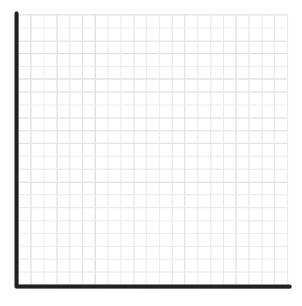

4. Since 2016, the Bank of expansionary monetary key interest rate. Using

Japan has practiced policy by lowering its the money market model

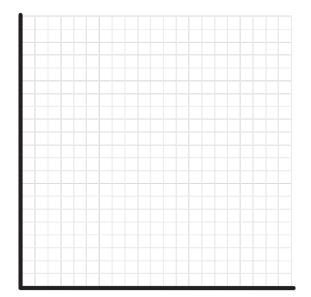

(assume the BOJ is operating under a **limited reserve system**), demonstrate how the BOJ accomplishes this low interest rate. Then draw the impact of the expansionary monetary policy on the Japanese economy using the AD-AS model. Assume Japan starts at full employment.

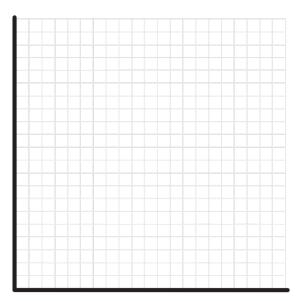

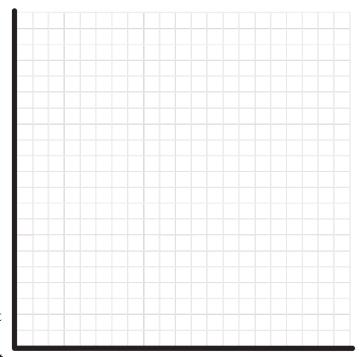

5. Since March 2022, the US Federal Reserve has aggressively raised interest rates in the United States from near 0 to over 5% as of 2023. In contrast, the Bank of Japan has maintained its expansionary monetary policy stance and has left interest rates at -.1%.

a. Draw the impact of the US' relatively higher interest rates on the foreign exchange market for both the USD (right graph) and the Japanese Yen (left graph). Under each graph, write whether the currency appreciates or depreciates.

b. Solely based on what occurred to the value of the currency, draw the impact of the currency's appreciation/depreciation on the Japanese economy using the AD-AS model.

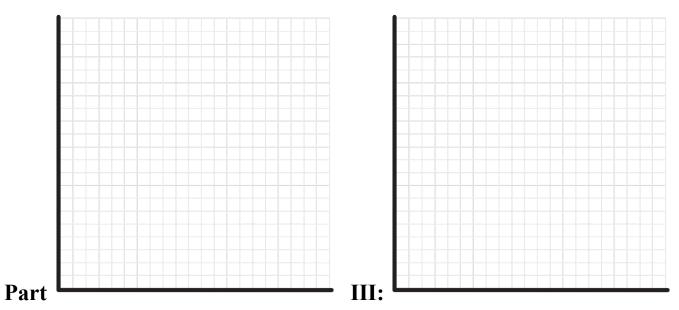

6. Japan's public debt from 63% in 1990

to GDP ratio has risen to 255% as of 2021. graph, draw the impact of

a. On the right grathis increase in government borrowing on the market for loanable funds.

Name:	Date:
-------	-------

b. Based on what occurred in the market for loanable funds, draw how this affects the Japanese economy using the AD-AS model. Assume the Japanese economy starts at full employment.

Long Run Impacts on the AD/AS Model

7. Assume the Japanese government decides to increase its public expenditures on tertiary education from its current level of .49% to 1% in 2024. Draw the SR and LR impact of this fiscal policy on the Japanese policy using the AD-AS model. Assume the Japanese economy starts at full employment.
